

FINELY GROUND & COARSE SEMOLINA

The HELIOS PASTA Industry, with its long-standing tradition in the field of pasta-making, has introduced another exceptional product. Added now to its wide range of products is semoline, offered in two types: coarse and fine.

Wheat, which provides the raw material for the product, is exclusively supplied by "AVLONA MILLS", after strict quality control. Semoline is processed and packaged under the most modern and strict specifications, resulting in a food product most suitable for consumption. Both the production line and packaging are fully automated, ensuring perfect appearance and stable quality without human intervention.

Both types of semoline are packaged in airtight 500 gr bags and then placed in 6 kgr cartons, which preserve the product during transportation and storage.

For the last 65 years, since its inception, the HELIOS PASTA Industry has adhered to quality. Its successful presence in the market is best proof that it has fully succeeded in this field. The excellent quality of all the HELIOS products has been recognised by internationally known organisations, who have awarded the industry numerous prizes.
